The revolution in nonlinear control engineering in the late 1990s has made the intersection of control theory and neuroscience possible. In Neural Control Engineering, Steven Schiff seeks to bridge the two fields, examining the application of new methods in nonlinear control engineering to neuroscience.

Steven Schiff's Neural Control Engineering: The Emerging Intersection Between Control Theory and Neuroscience is largely concerned with predicting and controlling the dynamics of the brain. The problem involves collecting observations of brain activity and filtering out noise and measurement errors. Issues related to brain dynamics are addressed in perhaps the most interesting part of the book—its final five chapters.
