Economic Development is the leading textbook in this field, providing a complete and balanced introduction to the requisite theory, the driving policy issues, and the latest research. Todaro and Smith take a policy-oriented approach, presenting economic theory in the context of critical policy debates and country-specific case studies so students see how theory relates to the problems and prospects of developing countries

This book examines general Nongovernmental organizations (NGOs) roles and comparative advantages in the broad fight to end global poverty, as well as roles and opportunities specific to particular Millennium Development Goals sectors.

Over 800 million people suffer from chronic hunger, and over ten million children die each year from preventable causes. These may seem like overwhelming statistics, but as Stephen Smith shows in this call to arms, global poverty is something that we can and should solve within our lifetimes. Ending Global Poverty explores the various traps that keep people mired in poverty, traps like poor nutrition, illiteracy, lack of access to health care, and others and presents eight keys to escaping these traps. Smith gives readers the tools they need to help people overcome poverty and to determine what approaches are most effective in fighting it. For example, celebrities in commercials who encourage viewers to "adopt" a poor child really seem to care, but will sending money to these organizations do the most good? Smith explains how to make an informed decision. Grass-roots programs and organizations are helping people gain the capabilities they need to escape from poverty and this book highlights many of the most promising of these strategies in some of the poorest countries in the world, explaining what they do and what makes them effective.

The book is orientated towards the teaching of economics within the context of the major problems of development and underdevelopment in Third World nations and fills a major void in the teaching materials available for this purpose. It has been written for use by first-year economic students at universities throughout Africa, Asia, Latin America and the Middle East.

This textbook includes discussions of such topics as the environment, the debt case, export-led industrialization, import substitution industrialization, growth theory and technological capability.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

International Economics, 13th Edition provides students with a comprehensive, up-to-date review of the field's essential principles and theory. This comprehensive textbook explains the concepts necessary to understand, evaluate, and address the economic problems and issues the nations of the world are currently facing, and are likely to face in the future. Balancing depth and accessibility, the text helps students identify the real-world relevance of the material through extensive practical applications and examples. The new, thoroughly-updated and expanded edition provides students with a solid knowledgebase in international trade theory and policy, balance of payments, foreign exchange markets and exchange rates, open-economy macroeconomics, and the international monetary system. The text uniquely employs the same graphical and numerical model in chapters that cover the same basic concept, allowing students to recognize the relationship among the different topics without having to start with a new example each time. Clear, straightforward discussions of each key concept and theory are complemented by concrete, accessible, and relatable examples that serve to strengthen student comprehension and retention. Topics include the 'Great Recession,' the increase in trade protectionism, excessive volatility and large misalignments of exchange rates, and the impacts of resource scarcity and climate change to continued growth and sustainable development.

By the winner of the 1988 Nobel Prize in Economics, an essential and paradigm-altering framework for understanding economic development--for both rich and poor--in the twenty-first century. Freedom, Sen argues, is both the end and most efficient means of sustaining economic life and the key to securing the general welfare of the world's entire population. Releasing the idea of individual freedom from association with any particular historical, intellectual, political, or religious tradition, Sen clearly demonstrates its current applicability and possibilities. In the new global economy, where, despite unprecedented increases in overall opulence, the contemporary world denies elementary freedoms to vast numbers--perhaps even the majority of people--he concludes, it is still possible to practically and optimistically restrain a sense of social accountability. Development as Freedom is essential reading.

This book outlines and analyzes the economic development of China between 1949 and 2007. Rather than being narrowly economic, the book addresses many of the broader aspects of development, including literacy, morality, demographics and the environment. The distinctive features of this book are its sweep and that it does not shy away from controversial issues. For example, there is no question that aspects of Maoism were disastrous but Bramall argues that there was another side to the whole programme. More recently, the current system of government has presided over three decades of very rapid economic growth. However, the author shows that this growth has come at a price. Bramall makes it clear that unless radical change takes place, Chinese growth will not be sustainable. This large, comprehensive text is relevant to all those studying the economic history of China as well as its contemporary economy. It is also useful more generally for students and researchers in the fields of international and development economics.
