A triac is very similar to a thyristor, with the difference that it can conduct in both directions. It has three electrodes, called anode 1 (A1), anode 2 (A2), and gate (G). It is used for regulation of alternating

A triac is a
bidirectional
thyristor. It
incorporates two
thyristors in a

Read Online Up To Date

single chip device and the complete unit is controlled by one gate. It has two terminal and a gate.

Thyristor is most suitable for control of inductive circuits such as motors.

Triacs, being bidirectional, have lesser dv/dt capability compared to thyristor.
